RIVERS SITUATION AND QUALITATIVE FLOOD FORECAST

I. METEOROLOGICAL FEATURES

- Yesterday's westerly wave over north Afghanistan still persists and its trough is affecting northern parts of the country.
- Yesterday's low-pressure system over west Rajasthan (India) has moved northeastwards and today lies over northeast Rajasthan and adjoining Haryana (India).
- Seasonal low-pressure area lies over northwest Balochistan.
- Moist currents from Bay of Bengal (along the foot hills of Himalayan mountains) are penetrating into central and upper parts of the country up to 3,000 feet.

II. METEOROLOGICAL OUTLOOK

- **Under the influence of low-pressure system, currently lying over northeast Rajasthan and adjoining Haryana (India) with monsoon currents from Bay of Bengal coupled with trough of westerly wave, scattered thunderstorm/rain is expected over upper Punjab, Khyber Pakhtunkhwa during next 24-hours.**

5. HOW CLOSE IS EACH RIVER TO ITS LIMIT?

Kalabagh is in low flood at 303.0 — 72.0 below its medium flood level (375.0). Each bar is one station's own flood levels across its maximum capacity; the solid run is the flow so far, the pale run is the room still left.

All figures in thousands of cusecs. Full bar = maximum (design) capacity. Solid colour is the flow reached so far and the pale wash beside it is the room still left; the dark line between them is the current reading, printed beneath it. Thin white lines are that station's flood levels with their thresholds beneath, so the same colour can begin at a different point on every bar. Each band is named inside itself — initialled (BL, L, M, H, VH, EH) where the band is too narrow for the words, and left blank where it is too narrow for those. Stations without a design capacity are not shown.
