5. HOW CLOSE IS EACH RIVER TO ITS LIMIT?

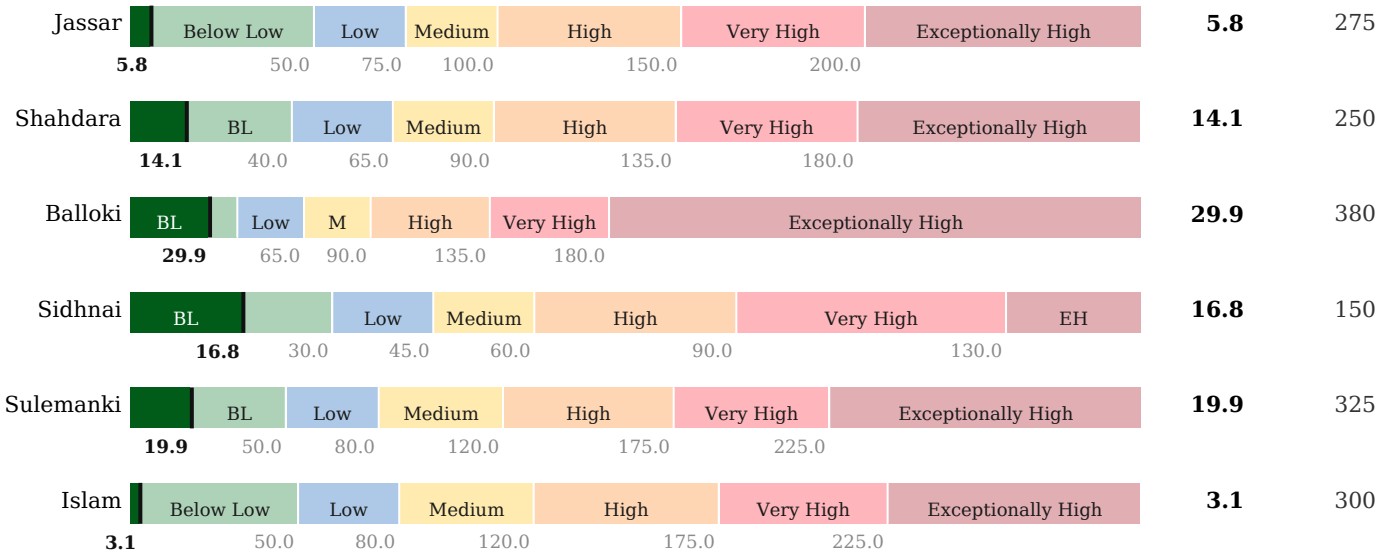

Guddu is in low to medium flood at 273.7 — 76.3 below its medium flood level (350.0). Each bar is one station's own flood levels across its maximum capacity; the solid run is the flow so far, the pale run is the room still left.

BULLETIN No: 057/26 **Dated: 10th August-2026**

Time: 12:15 hours (PST)

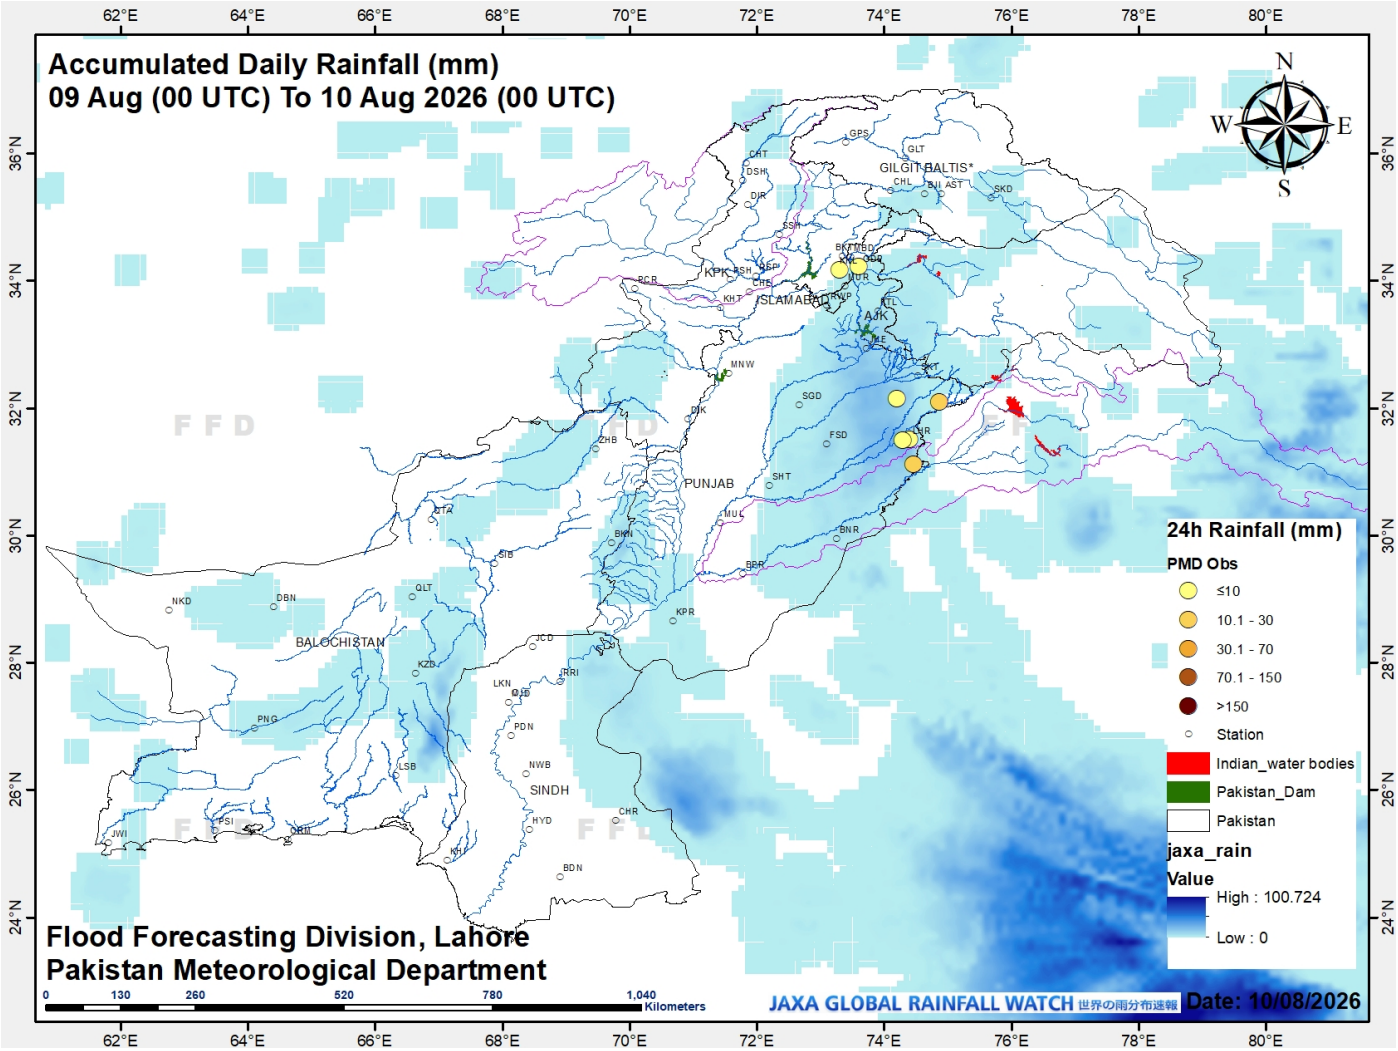

All figures in thousands of cusecs. Full bar = maximum (design) capacity. Solid colour is the flow reached so far and the pale wash beside it is the room still left; the dark line between them is the current reading, printed beneath it. Thin white lines are that station's flood levels with their thresholds beneath, so the same colour can begin at a different point on every bar. Each band is named inside itself — initialled (BL, L, M, H, VH, EH) where the band is too narrow for the words, and left blank where it is too narrow for those. Stations without a design capacity are not shown.
